Zoho Books is only available in Texas and California. There is no integration allowed for paying employee expenses. The absolute worst aspect is the fact that if you make even the slightest error in data input there is no backing up. You cannot undo an error.

The way the system works, you must avoid having much trust with the balances depicted. So far, it appears that Zoho Books uses what we called in school "that new math."

The system does not allow change once implemented, so you must get every one of your beginning balances perfect. The practice of Journal Entries is cumbersome. When reconciling, Zoho Books has adopted a number of required steps that significantly overcomplicate reconciliation using practices that are not consistent with general accounting principles in the US.

On the customer side, you must look in two places to see the beginning balance and the current receivables that might exist for current invoicing.

It would be terrifying to rely on this bookkeeping system to support an IRS Audit. The system violates too many fundamental accounting principles.

The software is used by so few people that there is concern that we might never find a skilled bookkeeper.
